

Patriot Techcorp Releases the Fully Automated OFAC Patriot™ Server Program v2.1.0

March, 2010

Patriot Techcorp' product innovation for its compliance solutions has continued from the initial release of the OFAC Patriot™ Server Program v2.0.1 in 2009, to the release of the Fully Automated OFAC Patriot™ Server Program v2.1.0 March, 2010.

- The OFAC Patriot™ Server Program v2.1.0 was developed specifically to be installed on a network server providing the network administrator with the ability to manage the shared network file folders which contain the OFAC SDN/PLC data search lists, user accept lists, input batch file and output report files.
- The OFAC Patriot™ Server Program v2.1.0 Setup function provides a feature to select a time to automatically connect to the OFAC Server on a daily basis in order to obtain the most recent OFAC SDN/PLC lists as provided by the OFAC division of the U.S. Department of Treasury.
- The OFAC Patriot™ Server Program v2.1.0 Setup function provides a feature that provides the user with the ability to schedule specific days and a time to conduct Automated Batch Input File Searches against the OFAC SDN/PLC lists.
- Upon scheduled Automated Batch Input File Search completion comprehensive Batch Search Result Reports are automatically saved for review and archived by date for future audit reference.
- The OFAC Patriot™ Server Program v2.1.0 has a Log Access feature in the program Setup tab with a Log File that provides detailed search result activity dates and times which coincides with the date and time of the specific updated OFAC SDN/PLC list the search was conducted against.

*****Note:** The Patriot Software installation package contains a .NET Framework executable file that automatically detects if the users system has the necessary .NET Framework version 2.0 installed which is required to effectively utilize the Patriot Software.

In the event the .NET Framework version 2.0 is not detected on the users system during the Patriot Software installation process, the .NET Framework version 2.0 will automatically be installed on the system and then the executable file will self destruct and delete itself from the users system. This process is completed in order to protect the hard disk resources of the users system by minimizing use of disk space.

Product Demo provided upon request.

About Patriot Techcorp
