

visionGATEWAY Inc. and Patriot Techcorp to provide specialist range of Compliance Solutions to Financial Services Industry

November, 2006

visionGATEWAY Inc., (OTCBB: VGWA), the developers and distributors of INTERScepter™, announced a Strategic Arrangement with Patriot Techcorp to supply a specialist range of Compliance Solutions to the Financial Services Industry, initially in the USA, then to expand to Europe and Australia. The compliance solutions include Patriot Techcorp's **Global Patriot™** software as well as visionGATEWAY's Internet Resource Management solution and Confidential Messaging tools.

The agreement extends the existing joint arrangement that has involved the development, distribution and support of the Global Patriot product.

Patriot Techcorp's primary focus is on the development and provision of compliance and technology solutions to address compliance issues for Anti-Money Laundering (AML), Anti-Terrorism, the USA PATRIOT Act, Office of Foreign Assets Control (OFAC), Bank Secrecy Act (BSA), and other related domestic and Global foreign governmental regulatory requirements.

In order to address these global legislation issues Patriot Techcorp developed the **Global Patriot™** program. The Global Patriot™ program is a software application that was designed to take compliance to the next level by providing:

- structured, risk-related intelligence to assist government, financial institutions and other government mandated entities
- coverage for entities both domestically in the United States and in countries around the globe
- facilities to achieve compliance with associated legislative issues
- assistance to further government policies and achieve national and international security objectives.

The Global Patriot™ program consolidates and organizes unstructured information into a database of highly structured profiles to be used to filter virtually unlimited amounts of transactional and other data for the presence of known high-risk entities.

Michael Kim, the President of Sales of Patriot Techcorp, said that the company recognizes the opportunity to expand its sales potential in the USA and other regions by leveraging a strategic relationship with visionGATEWAY which would provide immediate access to visionGATEWAY's channel distribution model in those countries. He also further outlined how he saw the opportunity to immediately introduce VGWA's INTERScepter product and security solutions to their existing clients in the US Financial Services market, particularly Credit Unions and Regional Banks where there was a need for this Internet Resource Management solution as an extension of their compliance requirements.

About Patriot Techcorp

Patriot Techcorp, Inc. is a software research and development and network security management services firm that specializes in combining advanced technology with vision and innovation to produce quality products and cost-effective solutions.

About visionGATEWAY, Inc.

visionGATEWAY Inc. (OTCBB:VGWA) is a software development & distribution company with R&D groups in Europe and Australia, distribution in USA, Europe, Australia/New Zealand and existing customers across four continents. The company provides an extensible platform of software components to power the 'Next Generation Network' (NGN). These components currently include:

- ◆ Internet Resource Management & Control
- ◆ Secure Mail & Secure Data Sharing
- ◆ Integrated encryption and digital rights management system
- ◆ Advanced Application Feature Server
- ◆ Voice over IP
- ◆ iPBX

The Company's core product, "INTERscepter™", is an Internet Resource Management & Security solution. It is an underlying "platform" to manage and control all IP usage. The initial INTERscepter versions have focused on an enterprise business solution that helps to improve Company earnings by assisting organizations in understanding, managing and exploiting Internet usage and valuable resources, including bandwidth, systems and employee productivity. The INTERscepter™ solution empowers managers to effectively control, schedule and utilize costly Internet resources, while placing responsibility on users to self manage and modify their Internet usage behavior.
